PROJECT ACRONYM AND TITLE: Logistical and economic aspects of the development of regional economies in the coastal area

FUNDING PROGRAMME: Scientific-Research Project Initiatives of The University of Rijeka (ZIP UNIRI)

PERSON RESPONSIBLE: Alen Jugović, Ph.D., Full Professor

FINANCIAL DATA

Project total cost	Overall funding assigned to PFRI
13.099,74 €	13.099,74 €

SUMMARY

In this scientific project, the economic and logistical factors that influence the development of the regional economy in the coastal area will be analysed. Special attention will be paid to regional areas with special development features, such as islands. In the coastal area, there are regional economies with extremely high rates of economic growth, but also those with extremely low ones. Their development usually depends on the transport infrastructure they have, the connection with the surrounding area and the complexity of their economic structure. The goal of this scientific project is to define the economic and logistical factors that influence the development of regional economies in the coastal area and to determine the intensity of their influence. Given their significance and impact on the development of certain coastal regions, guidelines will be proposed for the formation of an adequate development policy.

Start date	End date
01.06.2023.	31.05.2026.
