PERSON RESPONSIBLE: Tanja Poletan Jugović, PhD, Full Professor, University of Rijeka, Faculty of Maritime Studies

FINANCIAL DATA

Project total cost	Overall funding assigned to PFRI
13.152,83 €	13.152,83 €

SUMMARY

The aim of the project is to analyse the guidelines of „green“ maritime policy and the guidelines' impact on maritime transport, especially on seaports and cargo and passenger transport flows.

Seaports and transport flows as complex and heterogenous ecosystems within modern supply chains have to follow a partnership and coordinated development with clearly expressed interests and obligation of each stakeholder.

By established guidelines of the “green” maritime policy, ports and transport flows could more easily follow the transition to sustainable business models at the local and international level within logistics value chains.

Since sustainable business models are imperative for future development of seaports and maritime system, the aim of project is to research, develop and configurate a “green” ports' policy framework respecting the economic effects and value of each stakeholders in maritime logistic value, the ports' impact on the transport flows, economy, society and the environment respecting and actual national and international (EU) legislative frameworks.
