

## University of Rijeka, Faculty of Maritime studies

**PROJECT ACRONYM AND TITLE:** Development of an evaluation model of ports of county and local significance

**FUNDING PROGRAMME:** Scientific-Research Project Initiatives of The University of Rijeka (ZIP UNIRI)

**PERSON RESPONSIBLE:** Dražen Žgaljić, Ph.D., Assistant Professor

### FINANCIAL DATA

Project total cost	Overall funding assigned to PFRI
13.059,92 €	13.059,92 €

### SUMMARY

The research will be focused on the development of key success factors for the purpose of creating a universally applicable model for the analysis and assessment of the current situation in ports of the county and local significance. The field of work would include the development of a model with which it will be possible to create a representation of the current state of existing systems, study the effects of various components, and predict the behavior of elements within the system as well as the port's development potential.

The identification of the constituent elements of the port system at the county and local level along with the definition of the concept of sustainable port development is the fundamental focus of this research.

The lack of available sources of information on this topic is also the motivation for research and supplementing scientific knowledge in this area.

Start date	End date
1. 6. 2023.	31. 5. 2026.
